

HONICO's Connector for Infor COM – ePages provides all necessary integration processes to perform a bi-directional data transfer and is aligned with the ePages packages. Short implementation times and a high degree of standardization is guaranteed.

Highlights

- » Event controlled data matching: Changes in Infor COM are immediately transferred to the Shop; use of up-to-date standardizations (MQ, WebServices)
- » Support of Infor COM data versioning: In the case of simultaneous changes in the ERP and Shop; Clearing in Infor COM conflict management
- » Management of all Shop relevant data out of Infor COM
- » High security standards: Prevention of access out of the Webshop to Infor COM

Architecture

- » Pre-built integration processes
- » „Out of the Box“ processes: customer-, catalog-, material master data, prices and discounts, availability, orders, order status
- » Use of standard interfaces of Infor COM and ePages
